

HD LED cabinet sensor switch

Can be mounted inside a cabinet to act as an on/off switch - simply open the door to activate the cabinet light and close the door to turn the light off.

Can also be mounted very discretely on the underside or side of a cabinet or recessed into a pelmet- sensor switch is activated when a hand passes before it.

To change operation simply push the switch (using a small thin object such as a pin) located on the flat underside of the unit - unit must be connected to the power supply to change.
